

How to use ExoHair; Follicle Protectant Solution?

The **ExoHair** solution is applied with a syringe. Once the hair grafts are collected, the medium in which the grafts will be stored is moistened. The solution ensures that the grafts are kept in a moist medium.

ExoHair ensures that the quality of the grafts remains intact for a duration of up to 9 hours.

ExoHair solution is not suitable for systemic or local use.

The **ExoHair** solution cannot be administered through injection.
